

# BF50

## 50 hp 4-stroke Outboard Engine

new

### Honda 4-stroke engine

Clean, quiet, efficient and easy starting 50 hp engine with superb durability. Surpasses the World's most stringent environmental regulations.

Boosted Low Speed Torque (BLAST™) System advances ignition timing during full-throttle acceleration, resulting in explosive hole shot torque.

### Easy access

Wider hood clips give easier access to the engine, while the updated water jacket doesn't need removing to access anodes.

### Freshwater flushing hose

Helps ensure engine preservation between maintenance periods by simply connecting a garden hose.

Adjusts air/fuel mixture and ignition according to demands, maximising power and fuel efficiency when in cruising mode.

### On-board alternator

22 amp alternator provides high power for on-board needs.

### Safe operation

A range of features including oil pressure alert, start-in-gear protection and a wrist-fit engine kill-switch inspire confidence.

### 3 cylinder configuration

3 inline-cylinder configuration makes the Honda BF50 one of the lightest 50 hp engines available.

### Optional instrumentation

Tachometer, trim gauge and control unit available, dependent on model.

### Steering options

Optional remote control or tiller handle available (model dependent).

### Updated Electronic fuel injection (EFI)

The latest EFI technology delivers a precisely measured amount of fuel to the engine ensuring smoother peak performance while burning less fuel.

### Optional power trim and tilt

Electric power trim and tilt or gas assisted version available (gas tilt, tiller model only).

### Shock absorption

Double-density engine mountings for less vibration.

### Durable

An alumite treatment plus Honda's 4-Front corrosion process, protects the engine from the elements, increasing its life span.

Already a benchmark for 50 hp engines, the Honda BF50 has been re-styled and re-engineered to be even more efficient, durable and easy to maintain.

BLAST™ technology means you can enjoy greater acceleration and improved performance without increased fuel consumption. Honda's latest Electronic Fuel Injection (EFI) technology ensures smoother peak performance whilst burning less fuel, and our ECOmo Lean Burn system makes the engine cleaner, quieter and more fuel-efficient in cruising mode.
