

BF100

100 hp 4-stroke Outboard Engine

new

VTEC
Variable Valve Timing & Lift Electronic Control

Honda's exclusive variable valve timing and lift electronic control delivers outstanding additional top-end torque and increased fuel efficiency.

BLAST
BOOSTED LOW SPEED TORQUE

Boosted Low Speed Torque (BLAST™) System advances ignition timing during full-throttle acceleration, resulting in explosive hole shot torque.

Easy access

Wider hood clips give easier access to the engine, while the updated water jacket doesn't need removing to access anodes.

ECOMo
ECONOMY CONTROLLED MOTOR

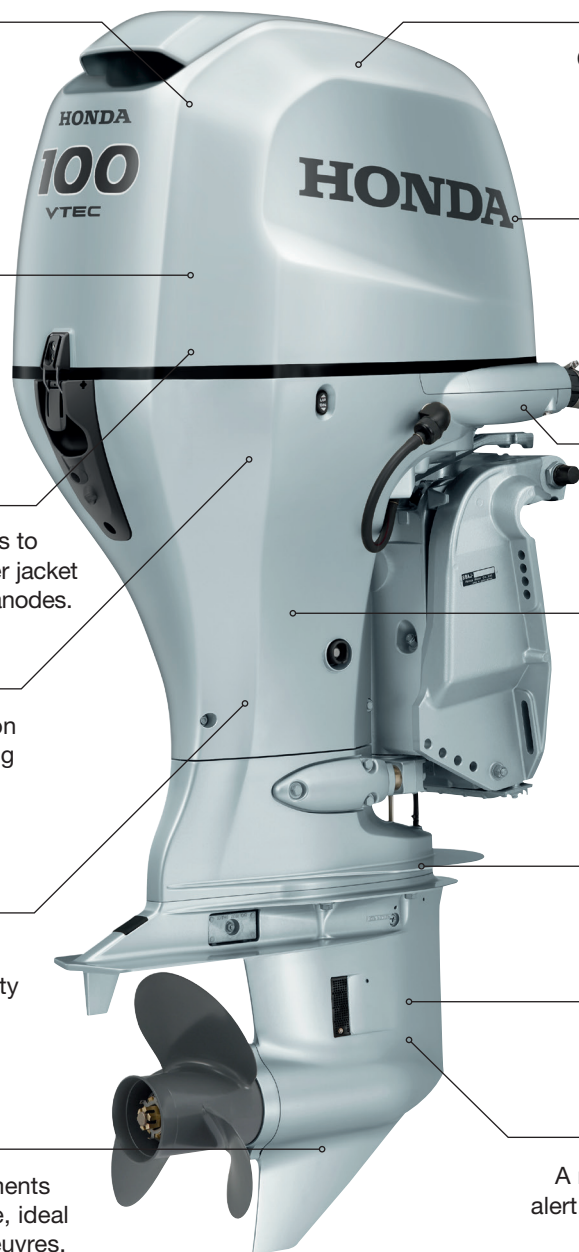

Adjusts air/fuel mixture and ignition according to demands, maximising power and fuel efficiency when in cruising mode.

NM EA 2000

This allows users to connect the engine to an ever increasing variety of electronic equipment such as chart plotters, fish finders and navigation equipment.

Trolling control

An optional extra: Precise adjustments in 50rpm increments can be made, ideal for fishing and slow-speed manoeuvres.

Honda 4-stroke engine

Clean, quiet, efficient and easy starting 100hp engine with superb durability. Surpasses the World's most stringent environmental regulations.

Updated Electronic fuel injection (EFI)

The latest EFI technology delivers a precisely measured amount of fuel to the engine ensuring smoother peak performance while burning less fuel.

44-amp alternator

Keeps the starting and dual-purpose battery banks charged all day – even when running multiple accessories.

Durable

An alumite treatment to the water jacket and anodes, plus Honda's patented, multi-layer 4-Front corrosion process 'HiM' (High corrosion coating for marine), protects the engine from the elements, increasing its life span.

3-way cooling

Greatly reduces engine wear for superb durability and reliability.

Hydrodynamic gear casing

High performance, streamlined design reduces splash and drag.

Safe operation

A range of features including oil pressure alert, start-in-gear protection and a wrist-fit engine kill-switch inspire confidence.

The Honda BF100 has been re-styled and re-engineered to be even more efficient, durable and easy to maintain – delivering new levels of power, performance and efficiency. The BF100 features Honda's race-derived VTEC system delivering smooth, stable idling at low speeds and incredible top-end power at higher speeds. Our latest Electronic Fuel Injection (EFI) technology ensures smoother peak performance whilst burning less fuel and ECOMo makes the engine cleaner, quieter and more fuel-efficient when cruising.
